DETAILED ACTION EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Andrew Calderon on August 25, 2008.

Claims 1, 8 and 20 have been amended as follows. Note also that the examiner's amendment made on March 24, 2008 to claims 1, 8 and 20 are also included here:

- 1. (Currently amended) A method of reordering data packets received out of order, the method comprising the steps of: reading context information from a received data packet to determine whether the received packet is in a given sequence; comparing said context information of the received data packet to an expected sequence count for the given sequence, and storing the received packet with said context information in a memory as a linked list when there is a match, all received packets in the linked list being in order; creating a new linked list each time a new data packet is received out-of-order; linking in order all subsequent packets received in order to the new linked list; constructing a reorder table of addresses of the a first packet for all linked lists; and reading packets out of the memory in an order specified by the reorder table.
- 8. (Currently amended) A method for ordering packets, the method comprising the steps of: detecting at least one of an in-sequence and an out-of-sequence packet chain in one or more packet flows; storing the detected at least one of the in-sequence and the out-of-sequence packet chain in a memory; providing a sequence number with each of the stored in-sequence and the out- of-sequence packet chain;

associating the sequence number with an address in the memory of at least one of the stored in-sequence and the out-of-sequence packet chain; ordering the at least one of the in-sequence and the out-of-sequence packet chain from the memory based on the associated sequence number to provide one or more packet flows all in-sequence; and creating a new linked list each time a new data packet of the new linking in order all subsequent packets received in sequence to the new linked list; constructing a reorder table of addresses of a first packet for all linked linked lists; and reading packets out of the memory in an order specified by the reorder table.

20. (Currently amended) A computer program product comprising a computer usable storage medium having readable program code embodied in the storage medium to perform a method operable to: detect at least one of an in-sequence and an out-of-sequence packet chain in one or more packet flows; store the detected at least one of the in-sequence and the out-of-sequence packet chain in a memory; provide a sequence number with each of the stored in-sequence and the out-of- sequence packet chain; associate the sequence number with an address in the memory of at least one of the stored in-sequence and the out-of-sequence packet chain; order the at least one of the in-sequence and the out-of-sequence packet chain from the memory based on the associated sequence number to provide one or more packet flows all in-sequence; and create a new linked list each time a new data packet of the packet chain is received out-of-sequence; and link in order all subsequent packets received in sequence to the new linked list; construct a reorder table of addresses of a first packet for all linked lists; and read packets out of the memory in an order specified by the reorder table.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

Claims 1, and 8 are allowed.

The prior art discloses a method and system of reordering packets received or transmitted in a communications system that have are out of order or out of sequence, Application/Control Number: 10/604,557

Art Unit: 2616

furthermore, the prior art discloses an information memory as a linked list based on a packet order.

The prior art however fails to disclose creating a new linked list each time a new data packet is received out-of-order, **linking in order all subsequent packets**received in order to the new linked list and constructing a reorder table of addresses of a first packet for all linked lists and reading packets out of the memory in an order specified by the reorder table.

Claim 20 is allowed.

The prior art discloses a method and system of reordering packets received or transmitted in a communications system that have are out of order or out of sequence, furthermore, the prior art discloses an information memory as a linked list based on a packet order.

The prior art however fails to disclose a computer program encoded with executable instructions to creat a new linked list each time a new data packet is received out-of-order, **link in order all subsequent packets received in order** to the new linked list and construct a reorder table of addresses of a first packet for all linked lists and read packets out of the memory in an order specified by the reorder table.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
